

## Test Task

Using Playwright with Python, write automated tests for the following website:

<https://demo.playwright.dev/todomvc/#/>

Your tests should cover the following requirements:

- A new todo item can be added using English text.
- A new todo item can be added using non-English characters.
- A new todo item can be added that includes numbers.
- A todo item can be marked as completed and appears correctly in the "Completed" view.
- A todo item can be deleted and no longer appears in any view.
- The "Active" filter correctly shows only items that are not completed.
- The "Completed" filter correctly shows only items that have been marked as completed.

Kindly submit your code in a public GitHub repository. Please include a brief README.md file with clear instructions on how to run your tests. This is a great opportunity to showcase your best work.
